

MOTION TARGETS IS PROUD TO BRING YOU THE FINEST MOST DEPENDABLE COMPUTERIZED POP-UP AND MOVING TARGET SYSTEMS EVER AVAILABLE.

Our fully self contained and portable system accepts virtually any 3-D archery target and all Motion Target Gun Hunter™ gun targets. The system may be used inside or out for archery or firearm events and provides maximum shooter enjoyment and profit for you.

3D TARGET OPTIONAL

A MOTION TARGETS SYSTEM FEATURE:

ALL ELECTRIC OPERATION

Simply plug into any suitable 110v outlet and start shooting! No need for troublesome air systems or the technological and service nightmares of video shooting systems. Completely dependable Electric Actuator drives are extremely quiet and offer years of trouble free service. New for 2009 all systems have integrated programming for both archery and firearm events built in so your system is suitable for any shooting venue.

COMPUTERIZED SYSTEM OPERATION

Motion Target systems come complete with state of the art computerized control box with touch screen remote control for confident ease of use and trouble free operation. System features 4 skill levels, and 8 basic presentation scenarios as well as a random setting. Within those 8 basic settings, target presentation scenarios can also be varied even more by easily manipulating target plug locations on the box. Shooters will never know what situation is coming next. With Over 1100 different scenarios possible without changing targets or stand location, Motion Target Systems provide the ultimate hunting simulation. System is fully self-contained, portable, and weather resistant. No complicated set up or service required! Just set up, plug in and shoot!

PROFITABLE

This system will pay for itself and start generating profit for the range very quickly. In a typical scenario shooters might pay \$3 per round and may shoot as many rounds as they wish. Archery rounds take about 3 minutes to complete. It is possible to shoot 4 shooters or more at a time per round safely. With 4 shooters per round that means you make \$12.00 with every press of the start button. Also with the new password protected counter and standard delayed start feature the system can be operated by the customer/shooters and number of rounds shot will be tallied by the computer to determine final cost of the session (much like a bowling alley works) This means money to you with little or no work on your part!
(Firearms rounds run much faster per round but are shot one shooter at a time. Total profits are comparable)

1 YEAR LIMITED WARRANTY

Motion Target systems are warranted to be free from manufacture defects for a period of one year from the date of purchase. Also Motion Targets offers free technical support for as long as you own your system. Also we offer back-up electronic insurance for your large events. With 3 weeks advanced notice we will send a back up electronic box in case you were to have a technical problem you pay only the cost of shipping and a small user fee. Due to the inherent dependability of the system, one has ever needed to use the back up box so far, but it can be there just in case. This adds peace of mind. See web site for complete details.

BE PART OF THE NEW SHOOTING REVOLUTION

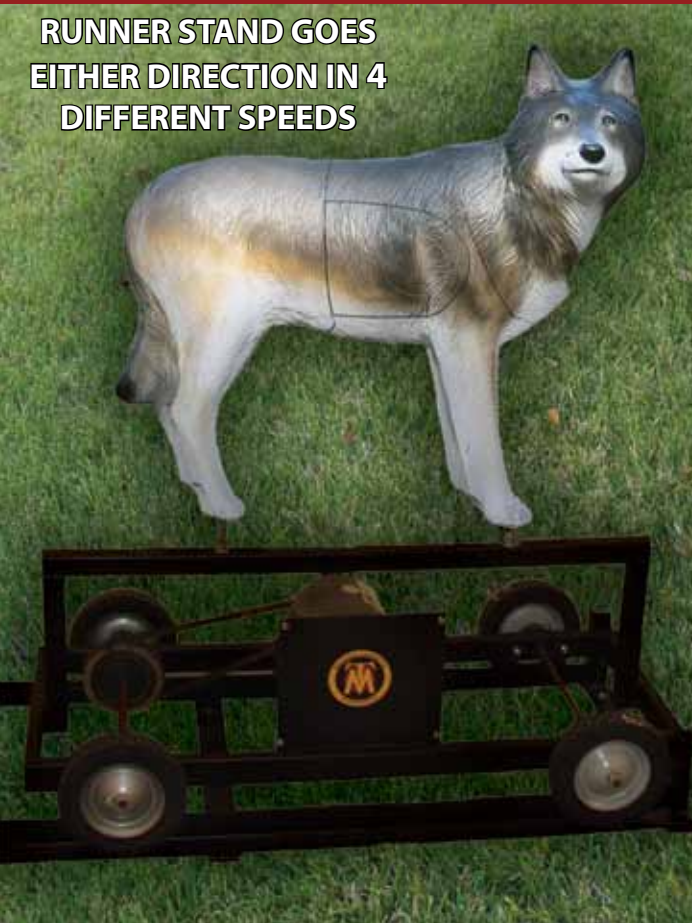

Motion Targets 3-D shooting is a fast paced fun event designed to simulate real hunting situations. It is exciting to watch and even more exciting to shoot!

SPECIAL DESIGNS

We have strived to make the Motion Target system as versatile, mobile, safe and easy to use as possible. We can also design a custom system to fit your individual needs. Just let us know what you have in mind, and our engineers will design a system to fit your desires. Call us for details.

RUNNER STAND GOES EITHER DIRECTION IN 4 DIFFERENT SPEEDS

UPGRADEABLE

Motion Target systems may be purchased in 5, 8, or 11 target configurations. 8 & 11 target options come with running target as standard. The computer system is easily upgradeable to add more targets at a later date as needed. The shooting scenarios and touch screen remote are easily upgradeable by installing a simple computer chip. This will keep your system up to date for years to come!

BACKSTOPS

MotionTargets also produces our new innovative Arrow Felt™ shooting backstops and stands that will help protect walls and other property by stopping or significantly reducing the velocity of most arrows. May be used in 8' X 10' or 8' X 5' size. (NOT FOR USE WITH FIREARMS EVENTS). Note these backstops will NOT provide complete safety or stop all arrows! A safe backdrop is always required. Motion Targets assumes no responsibility for damage or injury caused by projectiles which are not stopped by the backstop of stand.

Ten Foot Backstop

INTERNET TOURNAMENTS

(Patent pending) Motion Targets has plans to host a very innovative web based pop-up 3-D tournament that is sure to create massive interest across the country. Please see the website for details

Motion Targets was established in 2005 and is committed to excellent customer service and support. MotionTargets systems are redesigned and produced in the USA by qualified professionals with years of experience in electronic and mechanical systems. We are proud of the fact that our system is the most reliable shooting system of its type anywhere with fewer customer issues than any other shooting system. When compared to video shooting systems Motion Target systems require less maintenance, more reliability, more flexibility, more ways profit, and much less initial expense.
